# CC-GRIND grinding disc
## CC-GRIND VIEW

The innovative **CC-GRIND VIEW** grinding disc combines a unique design with **VICTO**GRAIN, one of the most effective, precision-formed abrasives in the world. The viewing pane enables users to work precisely whilst monitoring the work process.

### Recommendations for use:
- For optimum results, use with a flat contact angle.
- Only use the face of the disc, not suitable for peripheral grinding..

Here you will find further details and useful information about CC-GRIND VIEW.

Printed in Germany.

Subject to technical modifications.

02/2026

## Advantages

**Efficiently removes light scale without tool vitrification**

The viewing panes on the CC-GRIND VIEW provide a **clear view of the grinding process** for maximum control during grinding.

**Significantly more ergonomic than a conventional grinding wheel**: noise and vibrations are reduced significantly. In addition, a clearly superior surface is achieved.

Users can ensure an **optimal contact angle** based on the sparking in the middle of the viewing pane.

Glass fibre reinforced plastic backer guarantees use that is as **robust and safe** as with a grinding wheel.

**The fastest work progress due to highly aggressive abrasive.** Although the **VICTO**GRAIN tools only come with a single coating of abrasive grit, they offer an outstanding tool life which exceeds that of conventional grinding wheels and many flap discs.

In contrast to flap discs, they can achieve flat surfaces thanks to their **dimensional stability**.

Unlike fibre discs, the CC-GRIND VIEW does not deform even under extreme climatic conditions and is **significantly more robust in rough use**.

## CC-GRIND VIEW SGP STEELOX ★★★★

Grinding disc with unique design and the **VICTO**GRAIN high-performance abrasive grain. The viewing pane enables users to work precisely whilst monitoring the work process. Suitable for surface grinding, chamfering, deburring and work on weld seams.

**Special features:**
- Users can ensure an optimal contact angle based on the sparking in the middle of the viewing pane.
- Significantly more ergonomic than a grinding wheel: Noise and vibrations are significantly reduced.
- Glass fibre reinforced plastic backer guarantees use that is as robust and safe as with a grinding wheel.
